Mineral Exploration/Geophysics

Geophysical Operator | Grid Preparation

01 December 2020

A : Prince George, British Columbia

P : +01 306 2273139

E : notorious.nygaard@gmail.com

Mission Statement: I am a Forest Technologist which carved my way through the ranks of Mineral Exploration over the past 10 years. I have discovered the application of Geophysical Surveys to be highly relatable to the skill-sets gained from Forestry Consulting, eclipsing those within the industry currently. Geophysical Surveys are implemented prior to drilling to investigate a mineral prospect determined by a Geologist. Resistivity, Electromagnetic, Gravity, Airborne, Down-hole and Seismic are examples of some of the methodologies. The rapid progression of technology is making the practice of Geophysics more common and effective. Recent events in the world have sparked a huge demand in this sector and employers are faced with a lack of competent individuals to fulfill their contracts. It is my mission to recruit field workers from the Forest Industry into Mineral Exploration, as I know they are fundamentally better-equipped to navigate the rugged wilds of Canada.

Job Description: The ideal candidate will be physically fit and have a high tolerance for extreme weather, long commutes to remote locations and extended duration in remote camps. The candidate must possess the spirit of a pioneer to thrive... the use of helicopter, boat, snowmobile, ATV & chainsaw will help sustain this. Depending on the density of foliage, chainsaw cutting access-trails and grid-lines may be required. The survey generally consists of stringing multiple kilometres of wires through the forest and energizing them with a large generator and transmitter. Adjacent to, data is collected via receiver-computer(s) and sensor(s). All aspects can be taught and learned easily, the difficult part is remaining consistent through the adverse conditions.

Wages: \$250 - \$500/day (travel, food & lodging included) **Shift Duration:** 4 - 6 weeks

Location: Mining districts across Canada and the potential for international contracts
